

(a) CLAP

coherent = embeddings point the same way

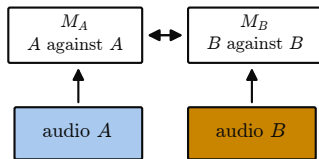

the trained tie is audio-to-text, not audio-to-audio

(b) SCS

coherent = same internal structure

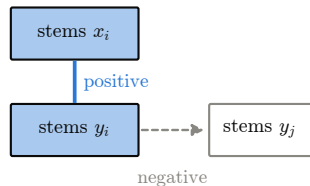

each matrix sees only its own segment

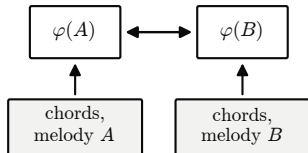

(c) COCOLA

coherent = sounds at the same time

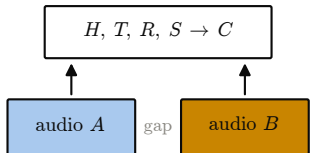

(d) REMAST

$|\varphi(B) - \varphi(A)|$, one-segment statistics

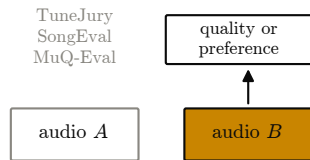

(e) MuRCo (this thesis)

coherent = follows on from

(f) one-clip scorers

no relation is scored

A is present but is not an argument
